PROFESSIONAL SUMMARY

Data Engineer with 3+ years of experience designing analytical databases, building automated ETL pipelines, and processing large-scale marketing data. Strong expertise in SQL, Python, Snowflake, and cloud data platforms with hands-on experience using Adverity for automated data ingestion and transformation. Passionate about scalable data modeling, reliable pipelines, and impact-driven analytics engineering.

WORK EXPERIENCE

Data Engineer

May 2025 – Present

Omnicom Media Group (formerly IPG Mediabrands)

Pune

- Designed and structured analytical database schemas in Snowflake to support scalable reporting and downstream analytics use cases.
- Built automated ETL workflows using Adverity to ingest, normalize, and transform multi-source marketing data, reducing manual effort by 40%.
- Developed Python scripts to extract, process, and prepare large datasets from Snowflake, ensuring analytics-ready data for reporting and visualization.
- Optimized complex SQL queries on high-volume datasets, reducing query execution time by up to 30%.
- Delivered a centralized data foundation for pacing and KPI tracking, enabling visualization teams to directly consume trusted datasets for dashboards and improving speed and consistency of decision-making.
- Collaborated closely with analytics and business teams to ensure timely availability of reliable data for performance monitoring and insights.

Solution Developer

Aug 2022 – Apr 2025

Tata Technologies

Pune

- Worked extensively with SQL and backend data workflows to support enterprise-scale applications.
- Optimized scheduled data jobs and backend processes, improving pipeline stability and execution efficiency.
- Performed root-cause analysis on data and performance issues, implementing long-term fixes to prevent recurrence.
- Collaborated with cross-functional teams to enhance data flow consistency and system reliability.

Software Engineering Intern

Aug 2021 – May 2022

HighRadius

Hyderabad

- Contributed to a large-scale codebase migration for a Treasury Management System in a fintech environment.
- Built data preprocessing pipelines using Python (Pandas, NumPy) to prepare structured datasets for analytics and modeling.
- Developed machine learning models that improved prediction accuracy by approximately 15%.
- Created visual insights using Matplotlib to support data-driven product decisions.

ACHIEVEMENTS

- Delivered a centralized data layer for pacing and KPI tracking across multiple teams using Adverity, Python, SQL, and Snowflake, eliminating manual report downloads and Excel-based consolidation.
- **Spot Award – Tata Technologies:** Recognized for strong ownership and consistent technical contributions in improving and stabilizing production data workflows.
- **2-Year Academic Scholarship:** Awarded a merit-based scholarship for consistent academic excellence during undergraduate studies.

SKILLS

- | | | | |
|--|--------------------------------|---------------------------------------|-------------|
| – Languages: SQL, Python | – Cloud Platforms: AWS, | ETL/ELT Pipelines, Data | Jira, Asana |
| – Databases & Warehouses: Snowflake, Oracle | Microsoft Fabric | Modeling, Schema Design | |
| | – Data Engineering: | – Tools: Adverity, Git, Linux, | |

EDUCATION

Chandigarh University

B.E. in Computer Science and Engineering (CGPA: 7.27)

May 2022

India
